FormFox Release 2024.10:   December 19, 2024

ENHANCEMENTS

- **NEW! FormFox Electronic Paperless Lab Copies of the CCF for all CRL Non-Federal Collections:** Beginning on 1/1, CRL will be rolling out electronic paperless lab copies of the CCF for all non-federal collections conducted within FormFox. Once individual clinics have been activated, all non-federal CRL collections will process using electronic paperless lab copies.

- **NEW! CRL Site Code:** There is a slight change being made to the documentation for Clinical collections being done for CRL. On the CCF, the FormFox clinic site ID is being replaced by the CRL site code.

- **Unable to Void:** To reduce errors in the "Unable to Void" path for urine collections, the field for "Current Status of this Collection" will not have a default selection. Going forward, the user will always need to make a selection.

- **Marketplace Cancellation Requests:** In some cases, a cancellation request is sent for a Marketplace order that is partially complete. Rather than canceling the entire order, including completed events, FormFox will now only cancel the events that have not been started yet. Clinics will be able to get paid for the events they have completed, even when other parts of the order get canceled.

- **OHS Status Updates:** FormFox users who perform Pre-Placement Exams and TB/PPD tests will notice that they have more choices to choose from in the list of statuses. The new status list includes: Complete, Incomplete, Cleared, Not-cleared, Additional Information Required, Return to office for follow-up, Expired, and Cleared with Restrictions. Also, it will be required to attach documents for statuses of: Complete, Cleared, and Cleared with Restrictions.

BUG FIXES

- **FormFox Complete / Search by Date Range:** FormFox date range searches are now inclusive of the search start and end dates. For example, if a user searches for events completed between 8/10 and 8/15, FormFox will search August 10th and the 15th not just August 11th - 14th.
