

FORMFOX ONE STEP ORAL™

FormFox One Step Oral™ is a rapid, instrument-interpreted oral fluid screening test that detects up to 11 drugs in minutes. Oral fluid testing offers a simple, convenient, and non-invasive method for testing drugs of abuse with fast, accurate results.

HOW FORMFOX ONE STEP ORAL™ WORKS:

1. COLLECTION:

An absorbent swab is placed in the donor's mouth to collect saliva.

2. TESTING:

The swab is inserted directly into the FormFox One Step Oral™ device.

3. RESULTS:

Results are read and available within 10 minutes via mobile app.

KEY ADVANTAGES:

SAFER, TAMPER-RESISTANT COLLECTION:

Self-contained, observed collection delivers fast, accurate screening while eliminating collector exposure to urine and limiting opportunities for sample substitution or adulteration.

SINGLE COLLECTION WITH CONFIRMATION SUPPORT:

One sample supports screening and lab confirmation, with MRO review of positive results included at no additional cost.

PRIVACY, COMFORT & CONVENIENCE:

Supports flexible testing anytime, anywhere, without specialized clinical facilities, restrooms, or gender-based observation challenges.

FASTER, HIGH-EFFICIENCY RESULTS:

Real-time negative results and simultaneous oral fluid collection help reduce turnaround times and process more donors in onsite or mobile environments.

APP-GUIDED INTELLIGENT WORKFLOW:

Instrument-interpreted results remove subjectivity and manual errors, while a smartphone-only setup eliminates bulky collection equipment, and an app-guided workflow standardizes collection and minimizes training.

STREAMLINED SCREENING & ORDERING:

Offers flexible screening for up to 11 drugs with a single SKU to reduce costs and simplify inventory, while enabling easy ordering, tracking, and results reporting via Marketplace and FormFox Workforce/API.

Screens for 11 Drugs:	
Cocaine	Barbiturates
Methamphetamines	MDMA/Ecstasy
Opiates	Methadone
Amphetamines	Oxycodone
Benzodiazepines	PCP
	THC
