

FormFox Release 2025.2 Customer Release Notes

Scheduled Release Date 3/14/25, 10PM CST

Enhancements

FormFox Workflows

- **Improved Observed and Split Notification:** On Pre-orders for DOT and NDOT urine, Formfox will always notify users of orders that are for direct observation. For NDOT orders, Formfox will notify the user when an order is for a split specimen.
- **Changes to Address Fields in FormFox:** FormFox has updated the layout of the address sections and updated the information a user can enter, specifically around the country and state for the Drivers License.

Collector Details

- **Collector Middle Initial:** The FormFox user details page now allows users to indicate if they don't have a middle initial. In addition, regulated collections for the FAA no longer have the user middle initial (MI) as a required field. Users are encouraged to update their middle initial information on the user details page.

Pending List

- **Instructions Change:** There is a small change being made to the instructions on the pending list.
In English the instructions now read: "START a collection by clicking the Donor ID."
In Spanish the instructions now read: "Haga clic en el valor que representa el id del donante."
