

# FormFox Release 2025.4.1

## EXTERNAL RELEASE NOTES

June 2025

### Bug Fix

**Paperless Workflow Forces Printing of Donor Copy:** This bug impacted clinics doing Paperless NDOT collections. The workflow was requiring collectors to print a donor copy of the CCF. This has been fixed. Now selecting any method of distribution, text, email, or print for the donor copy will allow the collection to be completed.

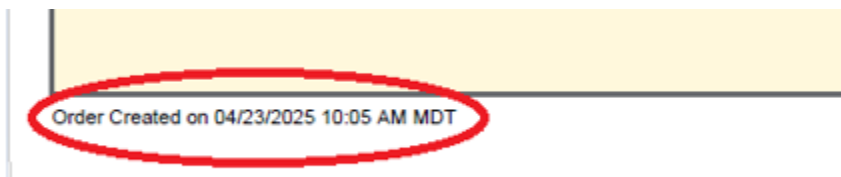

### Enhancements

**DOT Physicals MER & MEC:** The MER and MEC in FormFox have been updated to reflect the current expiration dates and current Public Burden Statements found in these documents.

**Update Status for OHS Event Captures:** To improve our Occupational Health Service event captures, we have added additional statuses for specific customers that you can select when performing these services. Previously, the statuses were limited to “Complete” or “Incomplete,” indicating that the service was or wasn’t performed. Going forward, you may see additional statuses that reflect the *outcome* of the service performed. These additional statuses are tied to the ordering party. The services updated in this release are: TB/PPD 1 & 2, Non-DOT Physicals, Chest X-Ray 1 View, Audiogram, Respirator Fit Qualitative, and Lift Test 1 & 2. More services will be updated in future releases.

API customers please note: These changes will affect API consumers who have already been notified of the changes required. These statuses are only for specific customers.

**Add Order Creation Date Stamp to Authorization Forms:** Authorization forms for some clients will now have the date the order was created on the lower left of the page. This applies to Marketplace and FormFox authorization forms created in Workforce or via the API.

**Update to DOT BAT Event Capture:** When performing a DOT BAT event capture in FormFox, if you select a status of “Complete,” uploading a document is now required. When the status is “Incomplete,” uploading a document is not required but you must add a comment describing why the event capture could not be completed. Entering a remark activates the “Finish” button and allows the service to be completed.

**Comments to Examiner for OHS Services:** Ordering parties can now attach comments to orders for Occupational Health Services. If comments have been added, you will see them in FormFox : highlighted in yellow just below the name of the service being performed.

User:

LIFT TEST LEVEL 1 (50 LB) EVENT CAPTURE

Order Comments: This is a comment for the examiner / Formfox user.
